DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 7-13 and 17-20 rejected under 35 U.S.C. 102(b) as being anticipated by Chu et al. (U.S. Patent # 5,945,870).

Chu et al. discloses the claimed invention a soft-start charge pump circuit (figures 1-2, 3 A-C, and 4-7), including a charge pump (figure 1, item 104), an amplitude modulator (figure 1, item 102), an oscillator (figure 1, item 100), the pumping voltage gradually changes along with the modulation of the amplitude (column 1, line 60-65), a clock generator (figure 1, item 108).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goerke et al. (U.S. Patent # 5,861,737) in combination with Marshall et al. (U.S. Patent # 6,121,760).

Goerke et al. disclose the claimed invention a soft-start charge pump circuit (figure 2-4), including a supply voltage (figure 4, item # 30), the pumping voltage gradually change (Abstract, line 10-15). However Goerke et al. does not disclose the utilization of the technique for amplitude modulating clock signal for a gradually increase the supply voltage. Marshall et al. teaches the utilization of the similar technique for the amplitude modulating clock signal for a gradually increase the supply voltage to charge pump for controlling switch. It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Goerke et al.'s soft-start switch by utilizing the technique taught by Marshall et al. for the purpose of increasing efficiency of the voltage regulator.

Allowable Subject Matter

3. Claims 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
